During the interview, we first asked participants to describe their existing role, product, and company. We then defined contestability and presented QCD to participants. Participants then took a few minutes to familiarize themselves with QCD and ask clarifying questions. The remainder of the interview focused on how participants perceived QCD. Specifically, we sought to understand how QCD addressed gaps in their knowledge and design process, how QCD relates to their existing work, and how QCD could be used in practice.

Introduction

How are you?
Introduce myself
Introduce the project

- My main research focus is contestability, how people can dispute algorithmic systems and its decisions
- Today, will be asking you to review a contestability framework

Obtain consent, if not already received
Disclosures

- Will be audio-recorded for solely research purposes, and video-recorded if you leave your camera
- We will then use the AI transcription provided by Microsoft to obtain a transcript
- Answers confidential, can not answer
- Trying to understand practices, not judging you

Do you have any questions?

START RECORDING

Interview Questions

We will begin by discussing your background and current role, then discuss how your team collects feedback for its products. Then, we will review a contestability framework.

Part 1 - General Background

- Describe your role at your company.
    - What decisions are you responsible for?
    - How are decisions made in your team?
    - How long have you been working on this team?

    - How long have you been in this career?
- Describe what your company does.
    - B2B or B2C?
- Describe the product that you work on.

Part 2 - Framework Review

Share what contestability is.

Go over the framework and its main sections together.

- When might this framework be useful?
- How does it align (or not) with your existing practices?
- Are there any sections that are particularly useful/relevant?
- Do you feel you could use this in your product?
    - Why might you want to implement it? Why might you not want to?

Conclusion

- Additional questions and comments?

Thank you for your time
